

Sapling Making Activity

On the occasion of the 'World Nature Conservation Day', The Green Club of KMKCP along with IIC-KMKCP organized a 'sapling making' session at the BMC nursery, Mulund, in collaboration with the NGO Hariyali on Sunday, 28th July 2024 from 9.00 -11.00 am. The students (12) and faculty (2) in an act of voluntary work helped prepare around 300 saplings of jamun and mango which are native trees by making the soil, planting the seeds/saplings in small bags, properly putting soil in the bags and transporting them to the appointed areas in the nursery. These saplings would then be planted in the forest area allotted to the NGO by the Forest Department, Govt. of Maharashtra.

Sapling making is closely tied to nature conservation through several key contributions such as Reforestation and Afforestation, Carbon Sequestration, Soil Conservation, Biodiversity Support, Water Cycle Regulation, Improving Air Quality, Community Engagement and Awareness and Aesthetic and Recreational Benefits. By engaging in sapling making, students have directly contributed to the conservation and restoration of natural environments, promoting ecological balance and sustainability. This activity has also bonded our young students, the future saviours of earth to the soil, earth and nature.

The Coordinators of the Green Club and IIC for this activity were Dr. Vandana Panda, Dr. Swati Patil, Ms. Akanksha Singh and Mr. Nikhil Rajnani.
